Supply Chain

**With Bluezone Supply Chain ensure you
are working with a safe, qualified and
accountable supply chain**

Bluezone supply chain module will provide an expansive solution to pre-qualify, evaluate, audit and monitor your entire supply chain.

Did you know?:

The term “Blue Zone” describes the healthiest places in the world to live and with Bluezone manager you can achieve a healthy, safe and compliant working environment.

How can you benefit from the Bluezone Supply Chain Module:

Control Risk

Protect your business and reputation by only working with compliant partners.

 The Bluezone RAG (Red Amber Green) system allows you to easily spot non-compliance and select those contractors or contractor staff members who are fully compliant and ready to go. Bluezone manager also allows you to identify gaps or risk in your supply chain by highlighting the items in red or amber. Email notifications can also be set up to notify the correct people in your organisation.

Central Location

Track and manage supplier and supplier personnel documentation in one location.

Eradicate repetition of work within your organisation by providing one location for all contractor information and provide permission based access, to those who need it.

Quality

With many of the recent scares ultimately coming from sub-suppliers/contractors rather than the main contractor, it is important to carry out due diligence on your supply chain to manage your risk and reputation.

Ensure suppliers meet your safety and quality standards or be notified when they do not.

Audit Ready

Bluezone manager continuously monitors supplier activity via daily alerts. You also receive verifiable data to assess potential risk exposure within your supply chain. Being proactive means bluezone manager ultimately offers supply chain transparency.

You can easily show quality, safety, ethical and environmental data as well as supporting documentation from your supply chain in audits (including ISO). Be audit ready - always!

The Chase is over

If you are constantly chasing suppliers for documentation and paperwork -STOP!

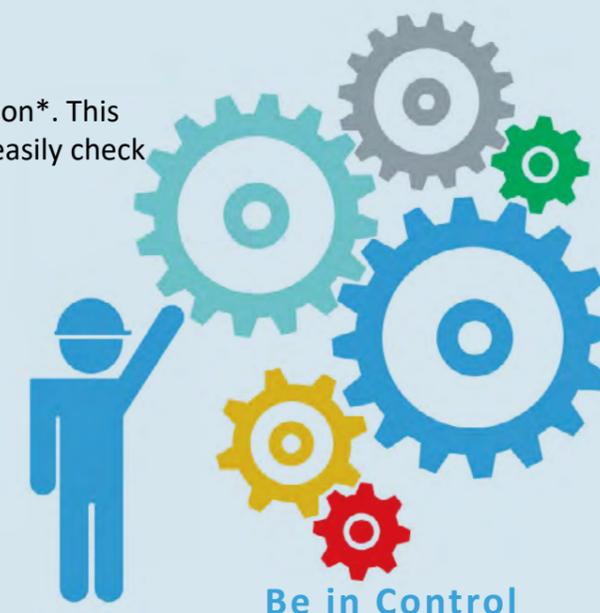

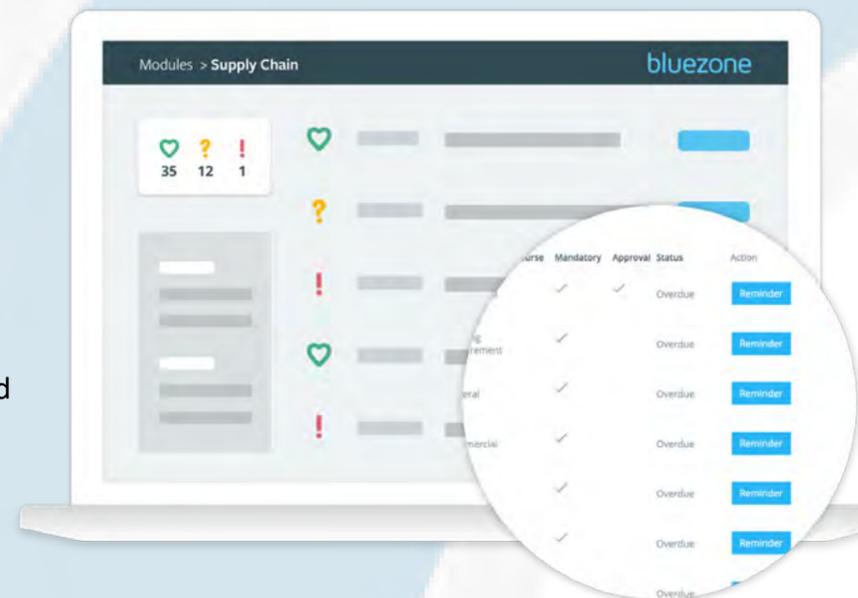

Bluezone manager switches the onus to your supply chain. Providing suppliers with a login to manage their documentation via the bluezone portal.

You are always given the opportunity to approve or reject and provide feedback to your contractor.

Training

Provide suppliers with your eLearning training or induction*. This can be done before suppliers arrive onsite and you can easily check their status before allowing contractor(s) to begin work.

*when integrated with other modules.

Extending H&S compliance and competency to your contractors

A sound working partnership is essential to achieve good health and safety performance when working with contractors.

As an organisation, you work extremely hard to build and maintain a culture of health and safety compliance.

The same can be applied to contractors when building a culture of safety and compliance which takes time and must be fully monitored to ensure success.

Employing contractors brings another dynamic and care is required when 'contracting out' activities.

All organisations involved must understand that they share responsibility for safety and must co-operate in managing risks.

Who is a Contractor?

A contractor is anyone you get in to work for you who is not an employee. Using contractors – for maintenance, repairs, installation, construction, demolition and many other jobs – is often routine in many organisations.

However too often accidents involve contractors onsite because they have not been through the correct procedures or there is a breakdown in

communication between the organisation and contractor.

Choosing a Contractor

For various reasons, organisations often need to engage contractors and the first step is selecting a suitable contractor.

You will need to ensure that the contractor you choose can do the job safely and without risks to health, meaning you should ensure they have the right combination of skills, experience and knowledge.

You should ask for a number of written assurances such as:

- Written health and safety policy
- Safety Method Statement
- Existing risk assessments done for similar jobs
- Qualifications and/or proof of skills and experience
- Copy of health and safety information and training provided to their workers
- Copy of Employers' Liability Compulsory Insurance
- Ask about Subcontracting

Finally, take care when you need someone in hurry- don't miss out on safety.

Sometimes you may have more than one contractor on site.

You need to think about how their work may affect each other and how they interact with your activities.

The more contractors the greater the risk of something being overlooked.
